caCORE Overview

The **caCORE** (cancer Common Ontologic Representation Environment) tools for model-driven software engineering include:

- caAdapter
- caCORE SDK
- caCORE Workbench
- Common Logging Module (CLM)
- Common Security Module (CSM)
- Semantic Integration Workbench (SIW)
- UML Loader

The [caCORE Build Process Diagram](#) illustrates how these software engineering tools work together and rely on caDSR and EVS to build an application that is [caBIG®](#) compatible.

About the CORE Wiki

This is the wiki for **caCORE tools**. The "child" pages include wiki home pages for the caCORE tools. See also the [caDSR Wiki](#), the [EVS Wiki](#), the [Vocabularies and Common Data Elements \(VCDE\) Wiki](#), and the [Architecture \(ARCH\) Wiki](#).

The development team posts working documents on the wiki, as well as detailed product information. Here you can see what's new in the caCORE product line and CORE infrastructure, learn about the software, and contribute if you have the right wiki permissions. (Click New Account in the top right corner and complete the form to sign up.)

Note

- Do not copy the content of a wiki page to another wiki page. [Include](#) or link to the content.
- [Use the title of the page or the Tiny Link](#) (not the URL displayed by the browser). The Tiny Link is a permanent link, and will work regardless of the number of edits performed.
